SUMMARY

Detail-oriented Computer Science (B.Tech) student and Machine Learning developer with hands-on experience in text data preprocessing, NLP classification, and model evaluation. Experienced in building clean, validated datasets, benchmarking model outputs, and working carefully to defined metrics and standards. Strong analytical and communication skills, comfortable working independently to meet deadlines, and keen to contribute to high-quality data annotation and conversational AI evaluation.

TECHNICAL SKILLS

NLP & Text Data: Text Preprocessing (tokenization, stop-word removal), TF-IDF, NLTK, Feature Engineering, Text Classification
Data Quality & Analysis: Data Cleaning, Data Validation, Model Evaluation & Benchmarking, Error Handling, Pandas, NumPy, SQL
AI / Machine Learning: TensorFlow, PyTorch, Keras, Scikit-learn, Transfer Learning, Computer Vision (OpenCV), LLM & Agentic AI Fundamentals
Programming & Tools: Python, C++, Flask, Streamlit, REST APIs, Git, Docker, automation pipelines

EXPERIENCE

Machine Learning Developer — Tradeking **May 2026 – Aug 2026**
Varanasi, Uttar Pradesh

- Built and automated data ingestion pipelines across structured and unstructured sources, cutting manual data cleaning and preprocessing effort and improving data consistency.
- Trained, fine-tuned, and benchmarked predictive models across multiple business initiatives, reviewing outputs to improve reliability and accuracy.
- Standardized validation metrics and error-handling routines across pipelines, making defects easier to identify and reducing manual effort for downstream analytics teams.
- Optimized inference latency and packaged models via REST APIs and Docker, collaborating with engineering for a smooth handoff to production.

PROJECTS

Fake News Detection using Machine Learning **Jan 2025 – Apr 2025**
Python, Scikit-learn, NLP, Logistic Regression, TF-IDF, Flask

- Built an NLP text classification model to distinguish real from fake news articles.
- Preprocessed raw text using tokenization, stop-word removal, and TF-IDF vectorization.
- Trained and benchmarked Logistic Regression and Naive Bayes models, achieving 90% classification accuracy; deployed via Flask.

Plant Disease Detection using Deep Learning **Aug 2025 – Dec 2025**
Python, TensorFlow, Keras, EfficientNetB4, Streamlit

- Built a multi-class image classification system using EfficientNetB4 with transfer learning to detect plant diseases from leaf images.
- Applied image preprocessing, data augmentation, and fine-tuning to reach 96% validation accuracy.
- Deployed an interactive Streamlit web app enabling real-time disease prediction from user-uploaded images.

EDUCATION

VIT Bhopal University — B.Tech, Computer Science and Engineering **Sep 2023 – Present**
Bhopal, Madhya Pradesh *CGPA: 8.19*

Sant Atulanand Convent School — Class XII **Mar 2022 – Jun 2023**
Varanasi, Uttar Pradesh *Percentage: 73.4%*

St. Joseph's Convent School — Class X **Mar 2020 – Jun 2021**
Varanasi, Uttar Pradesh *Percentage: 84%*

ACHIEVEMENTS

- Semifinalist, Johns Hopkins University Health Hackathon (USA) — worked with a 5-member team to design and build a health-tech solution under time-constrained conditions.
- Semifinalist, Adobe University Hackathon 2026 — developed and pitched a product solution with a 3-member team, advancing past the initial rounds of a nationwide competition.
- Achieved 96% validation accuracy on a multi-class plant disease classifier and 90% accuracy on a TF-IDF-based fake news classifier.
